EPFL Job: Robotics and Machine Learning

--

The Learning Algorithms and Systems Laboratory (<http://lasa.epfl.ch>) is looking for a researcher to work on a joint project between LASA and Samsung. The project requires to develop a safe and compliant robot that can interact with humans. The controller will be based on learning human motion and hence requires the use of different machine learning techniques.

The applicant must have a background in robot control and (if possible) in machine learning. Applicants with MSc degrees in robotics, mechanical engineering, microengineering, electrical engineering, computer science and physics are particularly well suited.

This is a one-year contract, possibly renewable for a second year.
Starting date: January 15 2019.

Interested candidates should send a CV with a motivation letter as soon as possible, as we will hire on a first come first serve basis.

Applications files should be sent by email to:

Prof. Aude Billard, aude.billard@epfl.ch
